

ALLIED
CONSTRUCTION

CAPABILITY STATEMENT

Take your project to new heights with Allied Constructions

ALLIED CONSTRUCTION

We specialise in delivering comprehensive Allied Construction services tailored to client needs. Our offerings include expert engineering design and consultation, ensuring precision and innovation from the outset.

We provide Front-End Loading (FEL) consultation and meticulous planning to streamline project execution. Our procurement and resourcing solutions secure top-quality materials and skilled personnel.

From Construction to commissioning, we oversee every detail for seamless project delivery. Post-completion, our field services support ensures ongoing success, while our operational readiness expertise prepares clients for efficient operations.

With our multi-disciplinary team and a client focused approach, we are committed to driving excellence and delivering results that exceed expectations.

WHY CHOOSE US

Our team combines hands-on field experience with diverse skillsets; ensuring confident, low risk project execution. Having built projects from the ground up, we know how to tackle challenges and deliver exceptional results. Our innovative solutions to complex problems often provide clients with value they've never seen before, earning their trust and ongoing partnerships. We're proud to deliver real value and consistently support our clients' needs.

CLIENTS WE'VE WORKED WITH

Projects Allied Construction have worked on

- EPC Construction Works
- Front-End Client Side Consultancy
- ROM Beneficiation & Handling
- Field Services & Shutdowns – Energy Sector, Coal, Hard Rock, Port, Marine
- Pumped Hydro, Solar, Wind
- Waste Water Treatment

We at Allied Construction Services, ensure that the safety of everyone will be prioritised. We are committed to lifting the bar on safety. All our on-site activities are governed by our four important safety measures.

1. WHAT'S THE PLAN?

Before starting any work, always make sure to review the safety measures listed in the lift plans and SWMS. Something changed? Stop and update the SWMS to include any new control measures.

2. SET THE SAFE ZONE

Have all exclusion been put in place? Make sure people are protected before conducting high-risk activities.

3. DID YOU CHECK IT?

Make sure all pre-starts and paperwork are completed and all lifting gear and equipment have been carefully checked before starting any work.

4. GOT YOUR BACK

Construction zones are busy places. Keep an eye on your fellow workers and protect each other when working on-site.
